

DIRECTIONS:

Eclipse was designed to be used with slightly wet hair.

- Before a chemical and thermal treatment, such as: Nanoplasty, Colouring, Bleaching, Blow Dry, Brushing...

- On clean and slightly wet hair (10-20%), spray the Eclipse fluid thoroughly through the hair, use a comb to pull the product through the entire length of the strands; Leave it for 5-10 minutes; Blast dry the hair if necessary; And continue with the normal procedure of the treatment desired.

- When doing a Nanoplasty procedure, before the flat iron step, with the hair still slightly wet (10-20%), give 7-8 pumps of the Eclipse over the hair, use a comb to pull the product through the entire length of the strands, and then finish drying the hair for the iron step.

- As Eclipse contains both UVA and UVB protection, beyond the reconstruction elements for the hair, it can be used as a leave in after any procedure conducted in the salon. Providing a high impact shine.

SIZES & EFFICIENCY
