

Always assess the quality of the hair before the procedure. Never conduct the Nanoplasty treatment on damaged/elastic/poor quality hair. If that is the case, a reconstruction treatment should be performed prior to the Nanoplasty.

DIRECTIONS:

No clarifying shampoo or washing is required unless the hair is dirty or has product on it.

1. Spray water on the hair just to get a little bit moist (10-20% only);
2. With the hair slightly moist, split the hair into 4-6 sections;
3. Shake well the bottle, and apply section by section from the root to the end, avoiding direct contact with the scalp (safe margin of 1cm), use a comb to pull the product through the entire length of the strands, cover well;
4. Leave it to act for 60-90 minutes with a simple plastic cap covering the entire head (no heat during this period), or the necessary time according to the density and porosity of the hair strands and technical analysis of the hairdresser;
5. Afterwards, rinse only the excess product from the hair. Try to leave around 10-20% of the product on the hair;
6. Dry the hair completely, it can be blast or a blow dry;
7. Heat the flat iron at a temperature ranging from 170 °C to 250 °C depending on the quality of the hair, colour, degree of curly, thickness, and density of the strands. The temperatures recommended on the table below are guidelines only and require technical analysis from the hairstylist. Check the temperature for any hair shaft lightening after the first's sections made. Flat iron in **thin sections** from 10 to 25 times depending on the amount of straightness desired, whilst confirming that the **strands are sealed**;
8. It isn't necessary to wash the hair after the iron step. However, we do recommend applying a **Sarah K Mask**, leaving it for 3 minutes, rinsing it out, and applying **Sarah K Conditioner** only. Then, Blast Dry the hair. This procedure will show your client how her hair will look when she washes it at home.

Carnival – For Virgin, Natural and Dark Hair

Rio – For Blonde and Coloured Hair

La Vie en Rose – For Dry/ Sensitive and Grey Hair

480°F-450°F / 250°C-230°C – Thick, stiff, coarse hair
